EXPERIENCE

Fresher,DATA ANALYTICS

Entry-level Data Analyst with hands-on experience in Python, SQL, Power BI, and Excel. Skilled in data cleaning, transformation, and visualization to extract actionable business insights. Strong communication skills and ability to work in a team environment.

EDUCATION

B.Tech in Computer Science & Engineering —
AECRC (BTU), Ajmer | Aug 2024

Class 12 (RBSE) —
Meera Sr. Sec. School, Ajmer | Jul 2020

Class 10 (RBSE) —
Govt. School, Ajmer | Jul 2018

PROJECTS

Data Analytics Project *(Python, SQL, Power BI)*

- Cleaned and transformed 50,000+ rows of raw data for analysis.
- Built interactive dashboards in Power BI to track KPIs and trends.
- Performed SQL queries to extract and manage data efficiently.

SKILLS

Technical: Python, SQL, Power BI, Excel, OOPS Data Structures &Algorithm

Soft Skills: Communication Skills, Email Writing, Leadership

LANGUAGES

Hindi,English

Power BI Projects

1. Sales Dashboard Analysis
    - Created an interactive Power BI dashboard for a retail dataset (via Google Drive)
    - Implemented monthly sales trend visualizations, category-wise profit & loss, and regional sales performance
    - Added slicers and KPIs for user-driven exploration and decision-making
2. Customer Segmentation Dashboard
    - Built a segmentation dashboard using customer data (orders, demographics)
    - Used Power BI's clustering and filtering to highlight top customer groups
    - Presented insights into high-value customer segments and their purchasing behavior

Python / Jupyter Notebook Projects

3. Data Cleaning & Analysis with Python

- Cleaned a messy e-commerce dataset using Pandas and NumPy
- Performed exploratory data analysis (EDA) to uncover order patterns, missing values, and outliers
- Visualized trends with Matplotlib / Seaborn for actionable business insights

4. SQL + Python Analytics Project
    - Loaded the same dataset in SQLite / PostgreSQL and wrote SQL queries (joins, group by, subqueries)
    - Exported SQL query results into Jupyter notebook and performed further analysis in Python
    - Generated summary reports and visualized key metrics (e.g., top-selling products, customer lifetime value)
